Instruction Manual for Teams

ZS Campus Beats Tech Challenge is centered around building an AI agent, where participants will apply their coding, analytical, and problem-solving skills to develop intelligent, real-world solutions. Students will work on data-driven scenarios that mirror challenges solved by ZS teams, gaining hands-on experience in AI, automation, and applied analytics.

Event Schedule:

Challenge Opens: 11:00 AM IST

Challenge Closes: 08:00 PM IST

Team Case Duration: 120 minutes (timed once started)

Latest Possible Start Time: 06:00 PM IST

Structure of the Event:

Part 1: AI Agent Builder Challenge (Team-Based)

- Candidates will work in teams to design a GenAI-powered workflow for a real-world business use case.
- The exercise requires participants to understand the problem statement, map out a logical workflow, and build a structured solution by placing and connecting the required nodes.
- Teams are expected to configure the workflow effectively, ensuring it is both functionally sound and aligned with the intended business outcome.
- The final submission will include the completed workflow along with a concise rationale explaining the team's approach, key design decisions, and expected outcomes.
- Evaluation will focus on structured thinking, clarity of logic, effective use of GenAI concepts, and the ability to translate business problems into well-defined workflows.

Part 2: Individual Quiz

Following the AI Agent Builder Challenge, participants will complete an individual assessment that includes three sections covering DBMS and cloud-based MCQs, a hands-on SQL exercise, and a combined SQL + Python coding problem.

- The first section evaluates foundational knowledge in databases and cloud concepts, with a balanced mix of SQL and cloud-focused questions.
- The second section tests the ability to write efficient SQL queries to solve structured data problems.
- The third section assesses coding, logic, and output validation skills through a practical problem-solving environment.

Overall, the challenge aims to assess technical accuracy, structured problem-solving, collaboration, and readiness to apply both traditional data skills and emerging GenAI capabilities in real-world contexts.

Note: The hackathon is a single-attempt assessment and must be completed without interruption once initiated.

System Requirements:

Each participant must use an individual laptop (No shared devices).

A working webcam and microphone is mandatory — the session is recorded.

Ensure a stable and high-speed internet connection throughout the event.

Instruction Manual for Team Captain

As the captain, you'll lead your team through the hackathon and be responsible for the final submission.

Key Responsibilities:

- Coordinate your team to start the challenge between the allocated time window
- Ensure all team members are present and have joined the session together.
- Lead the discussion and ensure contributions from everyone.
- Monitor the timer and submit the final response within 120 minutes.
- Only the team captain has submission access.

System Requirements:

Use a laptop with a functioning webcam and microphone.

A strong and reliable internet connection is essential for a smooth experience.
